

New System
Virtually Installs Itself

AutoCeil™

Ceiling and Wall Insulation System

US Patents 8844230, 8991110, 9133623, others pending

Watch it Work
autoceil.com

No Rafter Brace Penetrations
No Stand-off Roof Clips Required
No Roof Spacer Blocks Required

No Bottom Side Banding
No Bottom Side Ceiling Fasteners
No Laminated Insulation

AutoCeil System pulls sheet in minutes and covers ceiling and both side walls. System is tensioned, secured and ready for insulation.

AutoCeil™ features an automated ceiling installation process which provides a tensioned support system for uncompressed insulation, allowing designers and installers to safely, quickly and economically achieve any desired thermal performance. Our new patented methods use struts to support the seamless insulation system from the under side and for rafter bracing. AutoCeil completely eliminates banding, strapping, bottom side fasteners and seams throughout entire building bays.

› Safer › Faster › Easier

- + Automated Ceiling Installation
- + Significant Labor & Equipment Savings
- + Increase Construction Speed
- + Highest Thermal Performances
- + Conceals All Purlins and Girts
- + Vapor and Air Barrier Material
- + Light Reflective Interior
- + Easy Attachment for Trades
